                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The FDC cDNA was isolated from a natural cytotoxic lymphocyte cDNA library constructed in lambda gt10. The LAG-3 can be expressed in insect cells (i.e. Spodoptera frugiperda SF9 cells) in membrane-bound and soluble forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human lymphocyte membrane protein and DNA encoding it (LAG-3) - useful for antibodies and pharmaceutical products used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1871 BP; 300 A; 671 C; 524 G; 376 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an ahnormal amount of a protein encoded by a nucleic acid (NA) Group 1 molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a DNA encoding human lymphocyte activation gene-3 (LAG-3). This small cell lung cancer associated gene is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; small cell lung cancer; therapy; hCAAP; nucleic acid; NA; melanoma; cancer; colon; breast; head; neck; transitional cancer; leimyosarcoma; lymphocyte activation gene-3; LAG-3; synovial sarcoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encodisolated nucleic acid comprising an NA Group 3 or 4 molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1872 BP; 300 A; 673 C; 523 G; 376 T; 0 other;

This cDNA encodes LAG-3V1 (see AAW88359), a splice variant of human lymphocyte activation gene 3 (LAG-3) protein. LAG-3V1 is derived from the retention of intron 4, i.e. cleavage at the donor and acceptor sites flanking intron does not occur. An in-frame stop codon located after 8 codons in the retained intron 4 leads to a 36 kDa truncated soluble LAG-3V1 protein containing D1, D2 and 8 new amino acid residues. LAG-3V1 cDNA was obtained by RT-PCR amplification (see AAX06757-58) of peripheral blood mononuclear cell
                                                                                                                                                                                                                                                                                                         (ISTF ) ARS APPLIED RES SYSTEMS HOLDING NV.                                                                                                                                                                                                                                                                                                                                                                                     뫄
                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RNA. The invention provides 3 splice variants (see AAW88359-61) of LAG-3 and nucleotide sequences encoding them (see AAX05754-56). The CLAG-3 variants can be used in, or for the manufacture of, pharmaceutical or therapeutic compositions which are used to treat immune-related pathologies (claimed), in particular Thi-dependent diseases such as Hashimoto's thyroiditis, type I diabetes mellitus, multiple sclerosis, Crohn's disease, rheumatoid arthritis, acute allograft rejection, acute graft-versus-bost disease, Grave's ophthalmopathy, cerebral malaria, Lyme arthritis, reactive arthritis, decreating decreating unexplained recurrent abortion, aplastic anaemia and Helicobacter pylori-induced gastric antritis. LAG-3 variants can also be used for the manufacture of immunomodulator compounds (claimed), which can mimic or alter the biological function of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

It encodes LAG-3, a membrane-bound protein. A soluble form (LAG-3S) of the protein be produced in insect cells (i.e. Spodoptera frugiperda SF9 cells y removing the transmembrane region-coding sequence. This construct encodes the first 3 extracellular Ig-like domains of LAG-3 (V domain and two C2 domains) fused to a 17 amino acid fragment of the insect protein polyhedrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                            Human lymphocyte membrane protein and DNA encoding it (LAG-3) useful for antibodies and pharmaceutical products used to tree HIV-infected humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Key

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, ADDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatoryVulcerative bowel diseases. The present sequence is a gene of the invention.

The present invention provides a number of human metastasis associated genes which are modified by cytosine methylation. The sequences can be used in the diagnosis and treatment of cancer. The present sequence is one of the genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid derived from chemically treated metastasis genes, useful for diagnosis of cancers by analysis of cytosine methylation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, ADIS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

The sequences can be used in the diagnosis and treatment of cancer. The present sequence is one of the genes of the invention.

                                                                                                                                                                                                                                                                                                                CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC dentifying expressed genes (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) and its binding partners are useful in medical configuration of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations in CC consible for genetic disorders or other treats to assess biodiversity and its products dequences of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC anino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC contest The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO at the polymonint/pub/published_pct_sequences.

(I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags cc for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or cc quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical cc imaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cr responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. AAS64197-AAS94564 represent novel human cc diagnostic coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

                                                                         g
                                                                                                             δÃ
                                                                                                                                                                                                                                                                                    The present invention describes a library of human polynucleotides CC comprising the sequences given in AAZI2532 to AAZI779. Also described is CC a method of detecting differentially expressed genes correlated with the CC cancerous state of a mammalian cell, comprising detecting at least one CC differentially expressed gene product in a test sample from a cell cuspected of being cancerous, where the gene product is encoded by one CC plynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, CC mapping, tissue typing or profiling, forensics, genetic analysis and CC detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for expression levels, can be used for raising antibodies for experimental, diagnostic and CC therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an CC encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to CC identify a genetic predisposition or susceptibility to a disease such as CC cancer). The polynucleotides of the invention are especially used in the CC diagnosis, prognosis and management of colorectal cancer, breast cancer, and antarchists
                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              03-APR-1998;

Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Second strand was primed with a BamHl-dC primer [5'AGAGAGCTCGGATCCGCGCGCAATAATAATCC] 3'].
Double-stranded cDNA was then digested with BamHl and XhoI and directionally cloned into the BamHl and SalI sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T, Itoh M, Nagaoka S, SasakiN, Okazaki Y, Muramatsu M, Schneider C, Hayashizaki Y, High efficiency selection of full-length cDNA by improved biotinylated cap trapper., 71 a 208 c 137 g 67 t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note-"vector: lambda pSB; Site_1: BamHI; Site_2: EcoRI;
/first strand cDNA was primed with an anchored
XhoI-oligo(dT) primer [5'GGAGGACTGGAGGGCGCCAGGAGGAG(T)VN
3'; V-A,C,G; N-A,C,G,T] and then dG tailed. Second strand
was primed with a BamHI-dC primer
[5'ARAGACTCGAGTCGCGGCGCAATAATAATAATAATAATC)
Double-stranded cDNA was then digested with BamHI and XhoI
and directionally cloned into the BamHI and SalI sites of
lambda pSB vector. Library went through one round of
normalization. Library was constructed by Mei Yu at RIKEN
of Japan (Carninci P, Mestover A, Nishiyama Y, Ohsumi T,
Itoh M, Nagacka S, SasakiN, Okazaki Y, Muramatsu M,
Schneider C, Hayashizaki Y, High efficiency selection of
full-length cDNA by improved biotinylated cap trapper.,
DNA Res 4: 1, 61-6, Feb 28, 1997)

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP)-
http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC
library (Dros BAC) was made by Alain Billaud at CEPH (Centre
d'Etude du Polymorphisme Humain) with funding provided by a MRC
project grant. The DNA was prepared from embryos by Alain Bucheton
and Genevieve Payan. It has been constructed in the vector

Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies. Human ORFX ORF1553 polynucleotide sequence SEQ ID NO:3105
                                                                                                                           08-FEB-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients affilted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a phAhp, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (MA) Group 1 molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a small cell lung cancer associated gene designated as NY-SCLC-11, encoding human KIAA0963 protein.
